
Quantum channels: 56 reservoirs
Trace distance of pulse histories
Common-input suffix length
q=0.5
q=0.9
Unital noise preserves only the upper bound
One-qubit signal contrast
Hold cycles
Depolarizing only
Plus unital bit flips
Plus complete depolarization
Pure dephasing (outside model)
Cooling pipeline: fixed k = 2
Threshold decoding probability gap
Hold cycles (symlog)
n=17
n=37
n=77
n=157
n=317
n=637
No damping; n=157
